Professional Summary

Detail-oriented Network Engineer with hands-on experience designing and troubleshooting AWS and networking lab environments, including VPC peering, site-to-site VPNs, and centralized identity and access management using Active Directory. AWS Certified Cloud Practitioner, Solutions Architect, and CompTIA Network+ with foundational knowledge in routing, subnetting, network performance, and cloud networking concepts. Motivated to support large-scale, high-performance networks with a focus on reliability, optimization, and continuous learning.

Certifications

AWS Solutions Architect Associate | AWS Certified Cloud Practitioner | CompTIA Network+

Technical Skills

Active Directory | Network Troubleshooting | Routing Concepts | VPN (site to site) | AWS EC2 | AWS Architecture Basics | DNS/DHCP Services | NAS Configuration | Network Segmentation

Experience

Fred Hutchinson Cancer Center - *Seattle, WA*

Clinical Research Coordinator

Nov. 2022 – Present

- Serve as the key point of contact for internal teams and external stakeholders by explaining technical processes and data requirements in clear, accessible terms
- Collaborate with cross-functional teams (physicians, nurses, data managers, IT support) to identify system errors, implement process improvements, and streamline digital workflows
- Troubleshoot and resolve technical issues with electronic data capture (EDC) systems, REDCap databases, and clinical software platforms to ensure accurate and timely study documentation within

MD Anderson Cancer Center – *Houston, TX*

Data Research Coordinator

Apr. 2022 – Oct 2022

- Performed data validation and quality checks to identify and resolve discrepancies
- Documented data workflows and procedures to improve consistency and reduce errors
- Ensured data compliance with internal policies, regulatory standards, and industry best practices

Orion EMS – *Houston, TX*

Emergency Medical Technician Basic

Jun. 2021 – Apr 2022

- Coordinated with remote teams, dispatch, and hospitals to ensure timely and precise information sharing
- Maintained and tested technical equipment and operational systems to ensure consistent performance
- Responded to critical incidents using structured troubleshooting and decision-making under pressure

Technical Projects

- Deployed a windows server environment supporting centralized identity and network services, including Active Directory, DNS, and DHCP. Managed 500+ users, groups, and GPOs while troubleshooting authentication, name resolution, and network access issues across domain joined systems.
- Built and administered a headless Raspberry Pi NAS running OpenMediaVault on Debian Linux, managed entirely via SSH and CLI.
- Configured SMB/CIFS network file sharing to make storage accessible across all devices on the local network, simulating a real-world centralized file server environment.
- Engineered a site-to-site VPN between an on-premises lab and AWS VPC, configuring virtual private gateways, customer gateways, and routing policies. Validated encrypted tunnel performance and troubleshooted connectivity to ensure reliable inter-network communication.

Education

B.S in Public Health, The University of Texas at Austin | 2017-2021
