Professional Summary

Healthcare research professional with 4+ years operationalizing data privacy, regulatory compliance, and access controls in HIPAA-regulated clinical research environments overseeing 10+ concurrent oncology trials. Translate FDA, IRB, and Good Clinical Practice requirements into operational workflows, audit-ready documentation, and corrective-action plans across clinical, data, and IT teams. Currently spearheading a generative AI chatbot pilot to streamline departmental workflows, applying human-in-the-loop review and acceptable-use guardrails for outputs touching regulated patient data. AWS Certified Solutions Architect, Cloud Practitioner, and CompTIA Network+ with hands-on experience in identity and access management and cloud security controls.

Certifications

AWS Solutions Architect Associate | AWS Certified Cloud Practitioner | CompTIA Network+

Core Competencies

- **Privacy, Compliance & Risk:** HIPAA, IRB, Good Clinical Practice (GCP), data minimization, audit readiness, corrective-action planning, control documentation, vendor/sponsor coordination
- **AI Governance:** Generative AI pilot deployment, use-case scoping, human-in-the-loop review, acceptable-use guardrails, AI risk awareness (NIST AI RMF familiarity)
- **Identity, Access & Cloud Security:** Active Directory, Group Policy Objects, role-based access control, AWS IAM, VPC, site-to-site VPN, network segmentation, encrypted remote access (WireGuard)
- **Tools & Platforms:** REDCap, electronic data capture (EDC) systems, AWS (EC2, CloudWatch), Microsoft Office, Linux CLI, Docker, Git, HTML/CSS/JS

Experience

Fred Hutchinson Cancer Center - *Seattle, WA*

Clinical Research Coordinator

Nov. 2022 – Present

- Steward protected health information (PHI) across 10+ concurrent oncology clinical trials under HIPAA, IRB, FDA, and Good Clinical Practice frameworks; apply data minimization, role-based access, and audit-ready documentation standards
- Spearhead a generative AI chatbot pilot to streamline clinical research workflows; partner with clinical and IT stakeholders to scope acceptable use, document data-handling expectations, and apply human-in-the-loop review for outputs touching regulated patient data
- Translate complex regulatory and technical requirements into clear guidance for physicians, nurses, data managers, and IT — bridging technical and non-technical stakeholders
- Identify system risks across electronic data capture (EDC) and clinical software platforms; implement process improvements, resolve data integrity and access issues, and document corrective actions supporting sponsor, FDA, and institutional audits

MD Anderson Cancer Center – *Houston, TX*

Data Research Coordinator

Apr. 2022 – Oct 2022

- Conducted data validation and quality reviews against protocol requirements, surfacing discrepancies and documenting corrective actions to maintain evidence integrity for regulatory review; enforced data handling compliance with HIPAA, institutional policies, and clinical research industry standards
- Authored data workflow and procedure documentation, standardizing handling practices and reducing error rates across the research team

Orion EMS – *Houston, TX*

Emergency Medical Technician Basic

Jun. 2021 – Apr 2022

- Handled PHI under HIPAA across dispatch, hospitals, and care teams, ensuring secure and accurate information exchange under time-critical conditions
- Operated and tested critical equipment under defined protocols, applying disciplined troubleshooting and structured documentation practices
- Executed structured decision-making in high-stakes scenarios, coordinating with cross-functional teams under tight time constraints

Technical Projects

- **Identity & Access Management Lab (Active Directory):** Designed and administered a Windows Server Active Directory environment with 500+ users, OUs, and Group Policy Objects. Applied role-based access control, least privilege authentication policies, and centralized identity governance patterns across domain-joined systems.

- **Cloud Network Security Architecture (AWS):** Designed AWS VPC peering, route tables, and a site-to-site VPN between a simulated on-premises lab and an AWS VPC; configured virtual private and customer gateways, validated encrypted tunnel performance, and documented network flow for segmentation review.
- **AWS Serverless Web Application & Cloud Audit Trails:** Deployed a personal site on AWS Lambda and API Gateway with CloudWatch Logs for request tracing and audit-ready event capture; applied IAM least-privilege roles and built HTTP-status-code-based diagnostic workflows correlating logs by request ID for cloud troubleshooting.
- **Home Network Hardening & Perimeter Security:** Hardened a TP-Link Archer AX21 router with WPA2-AES encryption, SPI firewall, DoS protection, and Cloudflare/Quad9 DNS resolvers; segmented IoT and guest devices onto an isolated network to enforce defense-in-depth at the perimeter.
- **Hardened Linux Server & Network Segmentation Lab:** Built a headless Raspberry Pi server running OpenMediaVault on Debian Linux, administered via SSH and CLI; implemented encrypted remote access via WireGuard VPN and isolated services using Docker containers — applying defense-in-depth across host and service layers.

Education

B.S in Public Health, The University of Texas at Austin | 2017-2021
