Professional Summary

Data governance and AI enablement professional with 4+ years operationalizing data quality, access governance, and regulatory compliance across 10+ concurrent oncology trial datasets in healthcare. Profile, validate, and troubleshoot data to identify quality issues, drive root-cause remediation, and define access standards and ownership across cross-functional teams, in turn, reducing protocol deviation findings by ~90% and documentation error rates by 80%. Currently leading an institution-approved generative AI initiative, applying NIST AI RMF and ISO/IEC 42001 to scope, govern, and deploy an AI solution in a high-stakes regulated-data environment, including acceptable-use policy development and human-in-the-loop monitoring. AWS Certified Solutions Architect and Cloud Practitioner; pursuing IAPP AIGP (AI Governance Professional) certification.

Certifications

AWS Solutions Architect Associate | AWS Certified Cloud Practitioner | CompTIA Network+

CompTIA Security+ (in progress) | IAPP AIGP (in progress)

Core Competencies

Data Quality & Governance: data profiling, validation & troubleshooting; root-cause remediation; data minimization; standards & control documentation; ownership/stewardship definition; issue management processes; audit readiness

AI Enablement & Responsible AI: NIST AI RMF, ISO/IEC 42001, AI use-case scoping, acceptable-use policy development, human-in-the-loop (HITL) design, AI governance frameworks, cross-functional AI adoption enablement

Privacy, Compliance & Risk: HIPAA, IRB, Good Clinical Practice (GCP), privacy impact assessments, corrective-action planning, vendor/sponsor coordination

Identity, Access & Cloud Security: Active Directory, Group Policy Objects, role-based access control (RBAC), AWS IAM, VPC, site-to-site VPN, network segmentation

Tools & Platforms: SharePoint, REDCap, electronic data capture (EDC) systems, AWS (EC2, CloudWatch), Linux CLI, Docker, Git

Experience

Fred Hutchinson Cancer Center - *Seattle, WA*

Clinical Research Coordinator

Nov. 2022 – Present

- Manage 10+ concurrent oncology clinical trials under HIPAA, IRB, FDA, and Good Clinical Practice frameworks; apply data minimization, role-based access, and audit-ready documentation standards
- Spearhead a generative AI chatbot pilot to streamline clinical research workflows; partner with clinical and IT stakeholders to scope acceptable use, document data-handling expectations, and apply human-in-the-loop review for outputs touching regulated patient data
- Translate complex regulatory and technical requirements into clear guidance for physicians, nurses, data managers, and IT by bridging technical and non-technical stakeholders
- Identify system risks across electronic data capture (EDC) and clinical software platforms; implement process improvements, resolve data integrity and access issues, and document corrective actions supporting sponsor, FDA, and institutional audits

Helping Link - *Seattle, WA*

IT Manager

2026 – Present

- Advise nonprofit leadership on IT infrastructure improvements; assess existing systems, develop recommendations, and implement updated IT environments for a client organization with no dedicated technical staff.

MD Anderson Cancer Center – *Houston, TX*

Data Research Coordinator

Apr. 2022 – Oct 2022

- Conducted data validation and quality reviews against protocol requirements, surfacing discrepancies and documenting corrective actions to maintain evidence integrity for regulatory review; enforced data handling compliance with HIPAA, institutional policies, and clinical research industry standards
- Authored data workflow and procedure documentation, standardizing handling practices and reducing error rates across the research team

Orion EMS – *Houston, TX*

Emergency Medical Technician Basic

Jun. 2021 – Apr 2022

- Handled PHI under HIPAA across dispatch, hospitals, and care teams, ensuring secure and accurate information exchange under time-critical conditions
- Operated and tested critical equipment under defined protocols, applying disciplined troubleshooting and structured documentation practices

- Executed structured decision-making in high-stakes scenarios, coordinating with cross-functional teams under tight time constraints

Technical Projects

- **Responsible AI Chatbot Deployment (Perplexity):** Designed and deployed an institution-approved AI chatbot scoped to internal SOPs and NCT.gov trial protocols; applied the NIST AI RMF governance lifecycle, including acceptable-use policy, HITL routing, and a SharePoint-based monitoring feedback loop
- **Identity & Access Management Lab (Active Directory):** Designed and administered a Windows Server AD environment with 500+ users, OUs, and GPOs; applied RBAC and centralized identity governance across domain-joined systems.
- **Cloud Network Security Architecture (AWS):** Designed AWS VPC peering, a site-to-site VPN, and a serverless app (Lambda, API Gateway) with CloudWatch audit logging; applied IAM least-privilege roles across environments.

Education

B.S in Public Health, The University of Texas at Austin | 2017-2021
